Bariatric Advantage B₁₂ SpeedyMelts® are fast melting delicious tablets that deliver 1,000 mcg of high-quality vitamin B₁₂ and 200 mcg folic acid for collaborative nutritional support. Bariatric surgery can increase the risk for Vitamin B₁₂ deficiency, which has been reported in patients of all bariatric procedure types.¹ Excess weight is also a risk factor for vitamin B₁₂ deficiency.²

Patients of certain bariatric procedure types may have limited intrinsic factor,³ a substance produced in the lower part of the stomach, which is needed to absorb vitamin B₁₂. Additionally, certain medications that many patients take before and after surgery can decrease vitamin B₁₂ absorption and stores in the body.

ASMBS guidelines call for 1,000 mcg of vitamin B₁₂ per day for Gastric Bypass (RYGB/RNY) and Vertical Sleeve Gastrectomy (VSG/SG) patients.⁴

Vitamin B₁₂ in a cofactor in essential physiological reactions, and plays a very role for important nerves, brain, heart, blood cell production, and DNA. Adequate B₁₂ helps maintain energy metabolism.*
