Form: Array
Flavor: 
Size: 

Bariatric Advantage Dry Vitamin D₃ easy-digest mini capsules deliver 5,000 IU of vitamin D as cholecalciferol (D₃) in a water-miscible form that is usually recommended for patients for some bariatric patients.

- Vitamin D₃ is the clinically preferred form of vitamin D.

A water-miscible form of vitamin D is important for some patients as other fat-soluble forms require dietary fat for proper absorption. Some bariatric surgery patients lack the necessary dietary fat due to the impaired ability to absorb fat or reduced fat intake.

Vitamin D deficiency is one of the most common deficiencies seen with both pre- and post-surgery patients of all bariatric procedure types.

ASMBS guidelines call for at least 3,000 IU vitamin D per day for patients of most bariatric procedure types.¹

Vitamin D promotes calcium and phosphorus absorption and is needed for bone growth and bone remodeling
